

# Job-switch survey

Why do young professionals switch jobs,  
and what would have kept them?

A short survey of 22 to 30 year olds working in India. This document is the design: questions, sampling, analysis plan and limits. Results are added once responses are collected.

# Why do 22 to 30 year olds in India switch jobs, and what would have kept them?

## Hypotheses to test, written before any data is collected

### H1

Growth and pay are named most often, but manager and work-life reasons rank higher than people expect.

### H2

Most switches happen with an offer in hand, so pull reasons outnumber push reasons.

### H3

Intent to switch is highest in the second year of a job, so tenure band matters more than age.

A hypothesis can be wrong. If the data disagrees, the result is reported as it came.

# Short, anonymous and built for a phone

## Question

What reasons do young employees give for their last job switch or their next one, and what would have kept them?

## Respondents

Aged 22 to 30, working full time in India for at least 6 months, in any sector.

## Format

Google Form, short, anonymous, no employer names. Time to be measured in the pilot, target 4 minutes.

# Sections A to D: who answers and what they report

| Section           | Questions                                                                                                                                                | Answer type    |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| <b>A. Screen</b>  | Age band; works full time in India; months in current or most recent job (under 6 / 6 to 12 / 12 to 24 / over 24)                                        | Single choice  |
| <b>B. Profile</b> | City type; function (tech, sales, operations, finance, HR, other); company size band; total experience band                                              | Single choice  |
| <b>C. History</b> | Number of employers so far; switched employers in the last 24 months? If yes, months in the job left                                                     | Single choice  |
| <b>D. Reasons</b> | Pick up to 3 reasons for your last switch: pay, growth or promotion, manager, work-life balance, learning, stability, remote or location, culture, other | Pick 3, ranked |

# Sections E to I: the core questions

| Section         | Questions                                                                                | Answer type   |
|-----------------|------------------------------------------------------------------------------------------|---------------|
| E. Pull or push | Did you have an offer before deciding to leave? Yes, no, partly                          | Single choice |
| F. Pay change   | Pay change on switching: lower, same, up to 20%, 20 to 50%, over 50%                     | Single choice |
| G. Retention    | What one change would have kept you? Pay, role, manager, flexibility, promotion, nothing | Single choice |
| H. Intent       | How likely are you to look for a new job in the next 12 months, 1 to 5                   | Rating        |
| I. Open         | In one sentence, what made you decide it was time to leave?                              | Free text     |

# Each question has a planned table before data arrives

| Topic        | What is computed                                              | Output                              |
|--------------|---------------------------------------------------------------|-------------------------------------|
| Reasons      | Share naming each reason; first-ranked versus any-ranked      | Percent with 95% interval           |
| Pull or push | Share who left with an offer in hand; reasons by pull or push | Cross-tab                           |
| Tenure       | Months in job left, and intent score, by tenure band          | Medians, band shares                |
| Pay jump     | Pay change by reason named first                              | Cross-tab, flagged if cell under 10 |
| Retention    | What would have kept them, by first-ranked reason             | Counts                              |

# A small convenience sample, so results describe respondents only

## How people are reached

Personal and professional contacts, and their forwards. Target is 100 or more valid responses. No incentive is offered, which keeps answers honest but lowers response.

## What this cannot claim

Not a random sample, so no claim about all young Indians. Contacts skew urban, educated and in white-collar work. Every chart states n, and groups under 10 are not shown.

# Anonymous by design

## Collected

Age band, city type, broad function and answers. No name, email, phone number or employer name is asked for. The form does not require a Google sign-in.

## Shown to respondents

A short opening note: who runs the survey and why, that it is voluntary and anonymous, and that results will be published in aggregate on a public portfolio.

# What would make the findings stronger

| Limit              | Why it matters                             | How to reduce it                                                      |
|--------------------|--------------------------------------------|-----------------------------------------------------------------------|
| Convenience sample | Results may not match the wider population | Report n and profile; compare with published figures where they exist |
| Self-report        | People misremember spend or reasons        | Use bands and short recall windows                                    |
| Small subgroups    | Percentages swing with few answers         | Hide cells under 10; show intervals                                   |
| Pilot not yet run  | Wording may confuse                        | Test with 5 people and fix before wider sending                       |
